

## **Biodiversity**

The photographs below show how we have transformed our school grounds to be a hub for biodiversity. Creating our eco gardens, bug hotels and planting bee-friendly flowers. The Eco Committee worked with the site team to decide what aspects they wanted to include in their eco garden and designed it with them. They then worked with the site team to create some of the aspects for example creating their own bug hotels.

Throughout the summer term last year and in the upcoming summer term, all children in all year groups will be involved in gardening across the school. They will be planting bee-friendly flowers but also planting vegetables to grow which they hope to give out to families when they are grown and be used within the canteen.

The bird area of the eco garden is maintained by the Eco Committee and year groups regularly go out to complete bird watches and see which animals they can see using our Eco Garden. So far, they have seen a number of different types of birds, bees, spiders and bugs, and even frogs!
